## Permeable Paving at Hung Shui Kiu Community Farm Project ~ 450m<sup>2</sup> of Ronadeck Resin Bound Surfacing

Following Ronacrete UK's success in leading the UK market for seamless and decorative permeable pavements Ronacrete (Far East) Ltd were awarded this prestigious project for the Hong Kong Housing Authority in May this year.

Ronadeck Resin Bound Surfacing (RBS) was selected for its proven track record as decorative, durable, non-slip and permeable trafficable surface in the paved areas of the community farm. RBS is designed to allow routine easy access for foot and wheeled traffic between the planters nonetheless its permeability ensures that rainwater falling on the project soaks naturally to ground. Whilst not relevant for this project this permeability can contribute credits towards BEAM certification.

RBS is also fast curing; it becomes touch dry within a few hours and is ready for foot traffic by the next day. This can be especially important in avoiding contamination on busy projects with many trades on site and allows the contractor maximum flexibility with the minimum of downtime.

The aggregates and resins used are unique to Ronacrete and are blended specifically for this application. The polyurethane resin itself is UV stable and more than 30% derived from renewable biomass. This makes an important contribution to the environment when compared to traditional petroleum industry derived polyurethanes.

Ronacrete Far East and Ronacrete UK provided on-site training and technical support throughout the project. The first 50m<sup>2</sup> was installed under close supervision as can be seen in [this video](#) with the rest of the project completed to a high standard by the works subcontractor.
