

## Monoprufe SX700 & BX 500 - Fast Turnaround, Maximum Performance

Exposed waterproofing has never been this versatile or this capable

Monoprufe SX 700 a hot spray applied two component pure polyurea resin waterproofing membrane. It provides a very high performance elastic fast curing waterproofing system with exceptional strength and durability. The hot spray installation technique requires specialist equipment but with Monoprufe SX 700 it is immediately waterproof, can be accessed almost straight away and is capable of covering vast areas very quickly.

Monoprufe SX 700 multiple layer system consists of prime coat, body coat and UV resistant colour top coat which is Ideal for exposed long term zero maintenance areas such as roof top, balconies, water feature and etc.

Monoprufe BX 500 multiple layer system consists simply of prime coat and UV stable colour top coat. This amazing 2 component brush applied polyurea has the astonishing combination of long pot life and fast curing time making it ideal for smaller projects with restricted access. It is also fully compatible with Monoprufe SX 700 and can thus be used for small detail work, touching up or even as the colour-fast UV stable top coat or that system.

Hong Kong's climate is sub-tropical; the mean annual rainfall can be over 3000 mm, heavy rain from tropical cyclones may last for days and risks of damage from water ingress can be severe but a durable long term solution exists.
